EDUCATION

B.S. in Statistics: Data Science

Apr 2027

Brigham Young University — Provo, UT

- Minors in Information Systems & Computer Science
- Winner, BYU Statistics Underclassmen Team Case Study Competition (2024)
- Member: Statistics Club Association, Data Science Association, AI in Business Society, C.S. Lewis Society

SKILLS

Programming: Python, SQL, R, VBA, HTML, CSS, JavaScript

Tools & Platforms: Excel, n8n, Zapier, Git, GitHub, Tableau, Unity, Typst, Postman API

Professional: Workflow Automation, Business Process Improvement, Data Modeling, SOP Documentation

WORK & VOLUNTEER EXPERIENCE

Research Assistant — Dr. James Gaskin

Jan 2026 – Present

Brigham Young University Marriott School of Business — Provo, UT

- Leading end-to-end development of an augmented reality space application built in Unity
- Evaluated and benchmarked alternative AR tools to standardize the development pipeline on Unity
- Collaborate on cross-project reviews to optimize a faculty-developed statistical platform

Teaching Assistant — Introduction to Information Systems

Jan 2026 – Present

Brigham Young University Marriott School of Business — Provo, UT

- Provide technical mentorship and debugging support in SQL, VBA, HTML/CSS, and statistics
- Facilitate hands-on labs covering ERDs, flow charts, Tableau, and Excel Solver
- Collaborate with faculty to audit, review, and refine course curriculum and materials
- Design and deliver exam-review presentations that break down complex topics

Automation Specialist

Nov 2025 – Feb 2026

Empowered Cooks — Remote

- Built automated n8n workflows integrating Shopify, Customer.io, and Membership.io, leveraging Postman API
- Diagnosed, debugged, and rebuilt a failing business-critical automated workflow that had stalled under legacy development
- Audited and optimized outdated Zapier automations to resolve bugs and keep the data pipeline running

Records & Information Management Assistant

Jul 2024 – Jan 2026

BYU Office of Information Technology — Provo, UT

- Developed an Excel VBA macro that automated a quarterly data-gathering and formatting process, cutting a week of manual work down to ~20 minutes
- Engineered a barcode-scanning data pipeline integrated with existing records systems, eliminating manual tracking errors across over 10,000 records
- Programmed a data-matching script cross-referencing monthly HR job-change reports against 300+ active liaisons, automating update flags and reducing manual review time
- Authored SOPs and knowledge-base documentation that standardized record-handling processes, cutting onboarding and training time for liaisons and staff
- Provided technical support to a network of 300+ campus record liaisons, serving as first point of contact for records-system troubleshooting
